Funzione di controllo della luce ambientale

Una volta impostati i LUX, il sensore esegue una comparazione tra la luce naturale (esterna) e quella artificiale (interna), regolando, tramite protocollo DALI, il driver al raggiungimento del livello luminoso desiderato.

Daylight Harvest (Daylight Regulation)

Daylight sensor measures the available surrounding natural light, calculates how much electrical light is needed to reach the total lux expected. The demand is given to the LED driver by DALI signal, so as to deliver the needed amount of electric light
